How to Use This Guide

On the following pages, NGVAmerica has assembled information about vehicles and/or engines that have been certified by the US Environmental Protection Agency (EPA) and/or California Air Resources Board (CARB) to operate on natural gas, either as (1) dedicated vehicles - *spark-ignited engine operates on natural gas only* , (2) bi-fuel vehicles - *spark-ignited engine operates on either compressed natural gas (CNG) or gasoline, but not both at same time*, or (3) dual-fuel vehicles - *compression-cycle engine operates primarily on natural gas but uses diesel as ignition "pilot".* *

Generally, CARB's certification procedure imposes more testing and documentation requirements for both new-vehicle and aftermarket engine-retrofit ("conversion") systems than EPA, although both CARB and EPA have similar emissions and on-board diagnostics (OBD) compliance requirements. Other differences between the two sets of standards is that EPA classifies vehicles under 8500 pounds GVW as light duty and those over as heavy-duty while CARB's light duty classification goes up to 10,000 pounds. While most states require only EPA certification of new vehicles and aftermarket retrofit systems, a growing number of states are opting to adopt CARB standards for sale and/or registration of new vehicles. Check with your state officials to determine whether CARB standards for aftermarket retrofit systems have been adopted in your state; otherwise EPA standards apply.

This Guide's list of light -duty vehicles includes those manufactured at the factory by traditional Original Equipment Manufacturers (OEMs) such as American Honda, and those retrofit with EPA- or CARB-certified engine systems after leaving the factory using systems made by Small Volume Original Equipment Manufacturers (SVMs). Furthermore, SVM engine retrofit systems may be installed before placing the vehicle into active service or afterward. System installations are usually handled by the SVMs themselves or their Qualified System Retrofitters. Note that, unlike the unregulated "conversion kits" that were available from dozens of manufacturers in the late-1970s through the mid-1990s, all gaseous fuel engine systems on the market today are engineered and tested to comply with the same tough CARB and/or EPA emissions performance requirements as the large automobile manufacturers.

Also note that EPA and CARB certifications of light-duty vehicle retrofit systems are for specific model years and installation time-periods. Only ACTIVE CERTIFICATIONS are listed on the chart starting on page 3. **Some SVMs also hold certifications from previous years but these may not have been "carried forward" as required by EPA if the installation time period for the model year for which the cert was issued has now passed. Those interested in converting an existing vehicle should check with the SVMs about whether these prior year certifications have been renewed. Most have not been carried forward more than a year or two from the original model year in which they were issued.**

*When new engines are EPA- or CARB-certified to run on hydrogen (H2) or hydrogen-CNG blends (generically referred to as "HCNG"), these engines will be added to the listing. As of this revision of the guide (see date above), H2 and HCNG engines were being tested/monitored in various field RD&D trials but none had yet been certified for general commercial sale.

Engine/Vehicle Certifications (Vehicles over 14,000# GVWR)

BAF Technologies

6.8L V-10 (spark-ignited)	Dedicated CNG retrofit of Ford gasoline engine with active CARB/EPA certifications for: MY '09 and '10 E450 cutaway chassis (e.g., for shuttles, box trucks); EPA certified MY 2010 F450 and F550 heavy-duty utility truck chassis (CARB certification pending)
	(See also - chart of vehicles up to 14,000# for more BAF Technologies retrofit system certifications)

Baytech Corporation

See Light-Duty Vehicle charts for additional listings by Baytech Corporation

6.0L HD (spark-ignited)	Dedicated and Bi-Fuel CNG CARB/EPA MY '09 Chevrolet W4500 "cab-over" truck chassis; Isuzu NPR HD "cab-over" truck chassis; Workhorse MY'09 W42 walk-in van chassis (over 14,000#); Dedicated CNG (CARB/EPA) and Bi-Fuel CNG (EPA) MY '10 Chevrolet W4500 "cab-over" truck chassis; Isuzu NPR HD "cab-over" truck chassis; Workhorse MY'10 W42 walk-in van chassis (over 14,000#)
	Dedicated CNG retrofit of GM gasoline engine with CARB/EPA certifications covering : MY '09 and '10 G4500 cutaway (e.g., shuttles,box trucks);
8.1L (spark-ignited)	Dedicated CNG and Bi-Fuel (CARB/EPA) retrofit certifications covering MY '08, '09 C4500/5500 cutaway chassis; C4500/5500/6500/7500/8500 Topkick/Kodiak conventional truck chassis; Workhorse W62 walk-in van chassis. Dedicated CNG (CARB/EPA) and Bi-Fuel (EPA) MY'10 C4500/5500 cutaway chassis; C4500/5500/6500/7500/8500 Topkick/Kodiak conventional truck chassis; Workhorse W62 walk-in van chassis. GM discontinued sales/manufacturing of this engine in 2009, although as-yet-unsold and/or low-mileage models may still be retrofitted until December 31 2010. Contact SVM regarding availability for larger orders after this date.

Cummins Westport Inc

8.9L ISL G (spark-ignited)	Dedicated natural gas engine based on Cummins ISL diesel platform; 2010-compliant (.2 NOx and .01PM): HP ratings of 250, 260, 280, 300, 320; 660-1000 ft lbs torque. Available in: LCF refuse trucks by Peterbilt, Crane-Carrier, Autocar, International-Condor and Mack; Type D/4 school buses by Thomas Built (Saf-T-Liner HDX) and Blue Bird (All American RE); transit buses by New Flyer, NABI, Orion and Foton; work trucks by Freightliner (M2 tractors and M2 112 straight trucks), Kenworth (T440, T8SH), Peterbilt (365, 384); port "yard hostlers" by Capacity. Generally, CWI does not repower existing diesel vehicles, and instead, sells thru bus and truck OEMs and their dealers. There are exceptions to this general rule including some transit applications - contact your regional Cummins distributor or your CWI regional sales manager for more information.
----------------------------	---

Doosan Infracore America

11L GK12 Spark-ignited	Dedicated natural gas engine manufactured by Doosan rated at 290 HP/905 ft-lb torque; 2010 compliant using SCR with DPF. Currently available as repower option for transit, refuse and other HD applications
------------------------	--

Emission Solutions Inc

7.6L NG Phoenix (spark igniter)	Dedicated natural gas engine based on International-Navistar DT466 (#308 12-valve) diesel platform, remanufactured to natural gas operational specifications; EPA-/CARB-certified 2010-compliant at .2NOx and .01PM; 260 HP, 730 ft-lb torque; Engine/fuel system change-out for existing 1994-2003 diesel International DT466-equipped school buses, medium-/medium-heavy-duty and heavy-duty cutaway shuttles and work trucks. Also EPA-/CARB-certified 2010-compliant for repower of International-Navistar MaxxForce DT (#316, #326 24-valve) version of same engine with 300Hp and 860 ft.-lb torque.
---------------------------------	--

Westport Innovations

15L GX (compression ignit	Based on Cummins ISX diesel platform, this dual-fuel High Pressure Direct Injection (HPDI) system engine runs primarily on natural gas (90-99%) with diesel pilot fuel (1-10%); CARB/EPA-certified, available up to 475Hp configuration for HD work truck and line-haul applications (including OEM availability from Kenworth - Model T800; and Peterbilt - Models);
---------------------------	--

Spark-Ignited Natural Gas (SING) Vehicles Up to 14,000#

(Active Certifications Only - Contact SVM for Availabilities of Systems and Minimum Purchase Requirements for Previous Models Years)
 (Engine/vehicle listings below refer to EPA and/or CARB certificate holders; some companies listed below may also install other SVM's systems)
