33 Natural Gas Producers Join NGV America to Support the Use of Natural Gas Vehicles in the United States

— Group produces more than 40% of natural gas in America —

Washington DC — The 33 natural gas producer members of America's Natural Gas Alliance have voted to join forces with NGV America as members to support the use of natural gas for transportation in the United States. A total of 10 seats on the Board of Directors of NGV America will now be represented by the gas producers.

“With the long-term supply of natural gas in America assured, we are seeking to broaden its use to help the country achieve greater dependence from foreign oil,” said Regina Hopper, President and CEO, America's Natural Gas Alliance.

“Using natural gas for transportation is a key step in achieving our nation's energy goals.”

“NGV America welcomes these gas producers to help us promote and advocate for natural gas vehicles,” added Richard R. Kolodziej, President of NGV America.

“Their involvement and support significantly strengthens NGV America's ability

to carry the natural gas vehicle benefits message to customers and policymakers. We look forward to working closely with America's natural gas producers to displace foreign oil and reduce pollution and greenhouse gases through in increased use of natural gas in trucks, buses and cars.”

America's Natural Gas Alliance (www.anga.us) is an education organization formed by North America's leading independent natural gas exploration and production companies. Together, ANGA members produce over 40 percent of the total U.S. natural gas supply. ANGA is dedicated to increasing appreciation for the environmental, economic and national security benefits of clean, abundant, affordable and dependable North American natural gas.

NGVAmerica is a national organization dedicated to the development of a growing, sustainable and profitable market for vehicles powered by natural gas or biomethane. NGVAmerica represents more than 100 companies interested in the promotion and use of natural gas and biomethane as transportation fuels, including: engine, vehicle and equipment manufacturers; fleet operators and service providers; natural gas companies; and environmental groups and government organizations.
